### Allowance

1. Claims 1-75 are allowed.
2. The following is an examiner's statement of reasons for allowance:

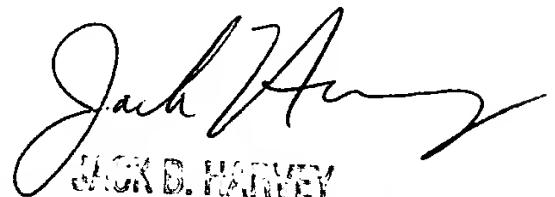

The prior art references most closely resembling the Applicant's claimed invention are Elliot et al (U.S. 6,335,927) and Dungan et al (U.S. 6,363,411).

First Elliot relates to a system and method of routing multimedia information through a hybrid network that includes a transfer of information across the Internet using telephone routing information through a hybrid network that includes transfer of information across the Internet using telephone routing information and Internet protocol address information. In particular, Elliot describes a telephone order entry procedure that captures complete user profile information for a user. The captured profile information is used by the system throughout the telephony experience for performing telephony control functions, i.e., routing, billing, monitoring, reporting, etc. However Elliot fails to disclose translating the service component in each appropriate domain manager into corresponding device specific parameters. These limitations are incorporated into all of the independent claims 1,24,29,44,48,49,53,54,55,61.

Second Dungan disclosed a system that includes an interface for receiving service components from a service creation platform enabling users to create services capable of being executed at a service node. Each service has associated service profile information defining service node

resources for storing, maintaining, and executing the service. However Dungna did not disclose translating the service component in each appropriate domain manager into corresponding device specific parameters. These limitations are incorporated into all of the independent claims 1,24,29,44,48,49,53,54,55,61.

In summary, the Examiner submits that there is no motivation to combine the aforementioned references; therefore, claims 1-75 have been deemed allowable over the prior art.
